

Terry Stone Solid Plastering is a distributor for the Quickclad and Quickwall range of products.

Quickclad is 80 mm thick, fire retardant, insulated polystyrene sheets attached to the frame of a building. This is then plastered with a fibre reinforced cement which has an alkaline resistant mesh imbedded into the skin coat. Additional material is then flat trowelled and finished with the Quickwall range of unlimited finishes.

Quickwall is a 2-pack mineral based system with a polymer additive. It is non-toxic and environmentally safe.

Quickwall is similar in appearance to cement rendering.

Regardless of whether colour is added to the base product or not the rendering still needs to be painted.

Without painting, water will migrate under the coat leading to product failure. The Quickwall system is painted eliminating improper work practises protecting both the builder and the customer.

# QUICKWALL

APPLIED FINISHES and COLOURED RENDERS for brickwork, blockwork, hardi-tex, AAC block, Heber external and internal coatings.

# QUICKCLAD

ENERGY EFFICIENT LIGHTWEIGHT CLADDING SYSTEM COATED WITH QUICKWALL APPLIED FINISHES.
